## Intravis improves hardware, software of CapWatcher inspection system

Issue: August 2015

**CapWatcher III** The third generation of this Intravis quality-inspection system detects material and manufacturing defects in plastic closures and records them, so that they can be removed from production. Six high-resolution color cameras capture sharp, six-megapixel images of each closure.

**What's new?** High-performance hardware and faster software for increased inspection speeds of up to 240,000 closures per hour. Also, the product recognizes mold cavity numbers and identifies the cavity responsible for micro-holes.

**Benefits** Accuracy and the ability to inspect very challenging closures, such as lightweight water closures, which have high translucency, low side wall heights and small tamper-evident bands.
